

Description:

The primary responsibility of the INEEL Oversight Program is to independently monitor and vigilantly oversee INEEL current and future operations and DOE transportation of radiological materials along transportation corridors to assure those activities are protective of public health and the land, air, water, and wildlife of Idaho; and provide Idahoans and their elected officials independent, factual analysis of INEEL activities.

Major Functions and Targeted Performance Standard(s) for Each Function:

1. Impact Assessments

A. Number of DOE NEPA documents reviewed

Actual Results

Program Results and Effect:

- 1) Oversees DOE's implementation of 1995 court settlement with the State of Idaho. DOE and the Navy have met settlement deadlines to date.
- 2) Coordinated state agency activities concerning the INEEL and DOE transportation.
- 3) Worked with INEEL-contiguous and transportation corridor counties to enhance radiological emergency planning and preparedness related to INEEL/DOE/NAVY activities.
- 4) Performed environmental monitoring on and around the INEEL. Results remain consistent with historical trends. Continue to show no significant additional impacts on human health or the environment.
- 5) Coordinated studies concerning potential impacts of INEEL activities (e.g., seismic studies, evaluation of DOE hazards assessments for INEEL facilities). Program studies continue to prompt improvements to DOE facilities and operations.

**Environmental Quality, Division of
Planning and Support**

Description:

The purpose of Planning and Support Services is to develop non-program specific division policies, legislation, rules, and regulations including those that sustain the state's delegated authority over permitting and regulatory programs; promotes public understanding of major environmental issues and solicits public input in environmental priority setting; assesses of and reports on division program effectiveness in improving water and air quality and preventing resource degradation; and services DEQ internal support needs.

Environmental Quality, Division of Planning and Support

Program Results and Effect:

The best bargain in state government is the provision and delivery of support services by DEQ staff working at department level abilities. The Financial Management Bureau manages DEQ's annual budget of approximately \$40 million in federal grants, state dedicated fund accounts, fee generated programs, and General Fund dollars. Recent legislative audits have identified no significant findings. The health of the agency budget is strong but has been hindered by continuing declines in federal grant funds and continued declining revenue sources in dedicated accounts. Coupled with limited growth in state government in the past four years, limitations of FTP's have required the agency to carefully and frugally manage limited available financial resources through redirection of resources to address major agency initiatives.

Utilizing a central approach of providing "transparent and seamless" support services, the Human Resources Unit has been effective in managing human resource requirements with limited staff.

The Information and Technology Bureau has been innovative in acquiring and maintaining a computer network which meets the needs of its users through outsourcing network services when and where appropriate. Limited staff support user services for over 450 hardware connections in six remote locations and in the central office facility in Boise.

The Planning, Prevention, and Outreach Bureau has involved greater numbers of employees in planning and reporting agency activities. Technical assistance in pollution prevention, underground storage tanks, and air requirements for small businesses has continued to increase and become more efficient. DEQ's health and safety program is improving through increased awareness, training, and structure integrated into daily activities.

Since July 1, 1999, the agency has reorganized. As a result, Planning and Support Services has been restructured into four (4) major administrative support functions under direction of the agency's Chief of Staff. These major administrative support functional units include: Fiscal Office; Human Resources Office; Community Affairs Office; Computer Services.

These groups will continue to provide centralized transparent and seamless administration services with a major emphasis on enhanced customer service approaches and simplified and meaningful processes.

**Environmental Quality, Division of
Air & Hazardous Waste**

Description:

The primary responsibilities of Air and Hazardous Waste Division are to provide an integrated environmental permitting program for air and hazardous materials; to provide a consolidated environmental inspection and compliance program for all facilities requiring permits, certification or approvals.

Major Functions and Targeted Performance Standard(s) for Each Function:

1. Title III Hazardous Air Pollutants

A. Section 112 /MACT Related Rulemaking Completed (TSB)

Program Results and Effect:

Air quality in Idaho has improved steadily since 1991, this year was no exception. In 1997, only one unhealthy air event was enumerated. In addition, DEQ has improved its technical assistance activities, and the results are encouraging.

Environmental Quality, Division of Water Quality & Remediation

Description:

The primary responsibility of Water Quality and Remediation is to encourage and provide regional opportunity for input and involvement into solutions of local environmental problems, while maintaining an overall state-wide consistency through prevention, ambient monitoring and cleanup activities in water and remediation issues.

Major Functions and Targeted Performance Standard(s) for Each Function:

1. Watershed Management

A. Number of Assessed River Miles

Program Results and Effect:

Water quality programs also demonstrated significant progress. The lawsuit concerning assessment of Idaho's water bodies was settled in 1997, resulting in Idaho agreeing to assess 962 water bodies by 2005. By the end of 1998 DEQ had completed six TMDLS for 61 stream segments. In addition, DEQ has been in partnership with other agencies to coordinate efforts between the water quality assessment and the Governor's Bull Trout plan. Water quality monitoring is demonstrating improvements in statewide conditions.
